ExperienceIQ

ProtectIQ

Enhanced
Parental
Controls!

What can you do with the mobile app?

- Change or reset your Wi-Fi network name or password.
- See all connected devices.
- Categorize devices (e.g., personal, work, mobile, or gaming devices).
- Pause the Internet for any device, at any time.
- Create temporary or shareable guest networks without sharing your primary network name and password. This is great for guests and can be sent directly from the app.
- Run a speed test (GigaSpire BLAST only) to verify the speed you are paying for.
- Receive updates about any planned network maintenance, upcoming community events, and promotions.

How is this going to benefit your family?

- Block categories like violence or pornography.
- Block gaming or social media apps that you deem inappropriate (e.g., Call of Duty or Snapchat).
- Set time limits for specific applications like TikTok to cap screen time.
- Set Safe Search and YouTube Restrictions to block harmful or inappropriate content when searching on Google, Bing, or YouTube. YouTube restriction also blocks all comments on videos which often include inappropriate language.
- View usage for all devices to better understand HOW the Internet is used in your home.
- Prioritize app groups or specific devices to ensure the best possible experience for your most important needs. This is great for Work From Home households.

How does this keep your home network safe?

- Proactively monitors your home's incoming traffic and automatically blocks anything suspicious.
- Blocks attempted visits to known harmful websites.
- Provides an active security monitoring service that uses a large and constantly growing database of threats (updated weekly).
- Uses intrusion prevention settings (IPS) to monitor, notify, and prevent activity like hackers trying to access local video content, virtual meetings, and other streams.
- Actively terminates data transfers before malicious payload is delivered to any vulnerable network device.
- Notifies users whenever a security issue is triggered, including details about the device that was attacked, where the attack came from and when it occurred.

*Managed Wi-Fi is in conjunction with BWTelcom Fiber Internet service, \$25.95 standard installation fee and taxes not included in listed price. Not available in all areas. Please call for complete details.
